What is a Minecraft Server Address? – A Minecraft Server address is another name for a IP address. It is the combination of numbers and letters that are given to you by your internet provider. This will only be needed if you are using an individual server and want to connect directly through the IP address by typing it into your internet browser or from the host name of the server. For more information about this, please refer to our article on how to connect to your minecraft server here.",

The game features a dedicated server browser interface on the official website which allows players to choose from a selection of servers to play on, although these are not all guaranteed to be free from hackers and cheaters. Note that some servers may be permanently locked by hackers as a form of revenge. To gain access to such rarer servers players are usually required to send an email request.",

Another really popular mod has to be Minecraft SMP4 Mod which makes all mobs more dangerous than they were before. This makes the game more challenging and a lot more fun as well as a way to add some different life to the game. The mobs will have more health, attack, damage, and range so that it is actually possible for them to take you down. This mod is great if you want an even harder experience than when you are playing by yourself. More Info Download: Minecraft SMP4 Mod OpenBlocks Intelligent In-Game Console",
